DIGIDORO

Welcome to our Digidoro app, a tool designed to help you manage your time efficiently and increase your productivity.

Our Digidoro app offers you a number of powerful features and functionality. First, it has an intuitive and easy-to-use timer, which will allow you to set work and rest intervals according to your needs. You can customize the duration of the work and rest cycles to suit your work style and level of concentration.

DIGIDORO BENEFITS

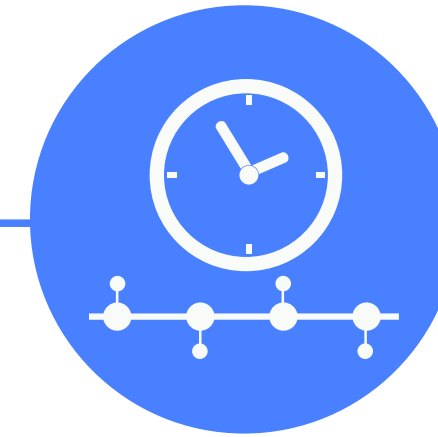

IMPROVE YOUR CONCENTRATION

By working in short, defined time intervals, concentration on the task at hand is encouraged. Avoiding distractions during that time helps keep the focus on the main task.

INCREASE YOUR PRODUCTIVITY

The app encourages productivity by setting clear and achievable goals for each time slot. Working in a focused and consistent manner during pomodoros allows you to complete tasks more efficiently.

EFFECTIVELY MANAGE YOUR TIME

Digidoro allows better planning and prioritization of activities, since specific pomodoros can be assigned to each task.

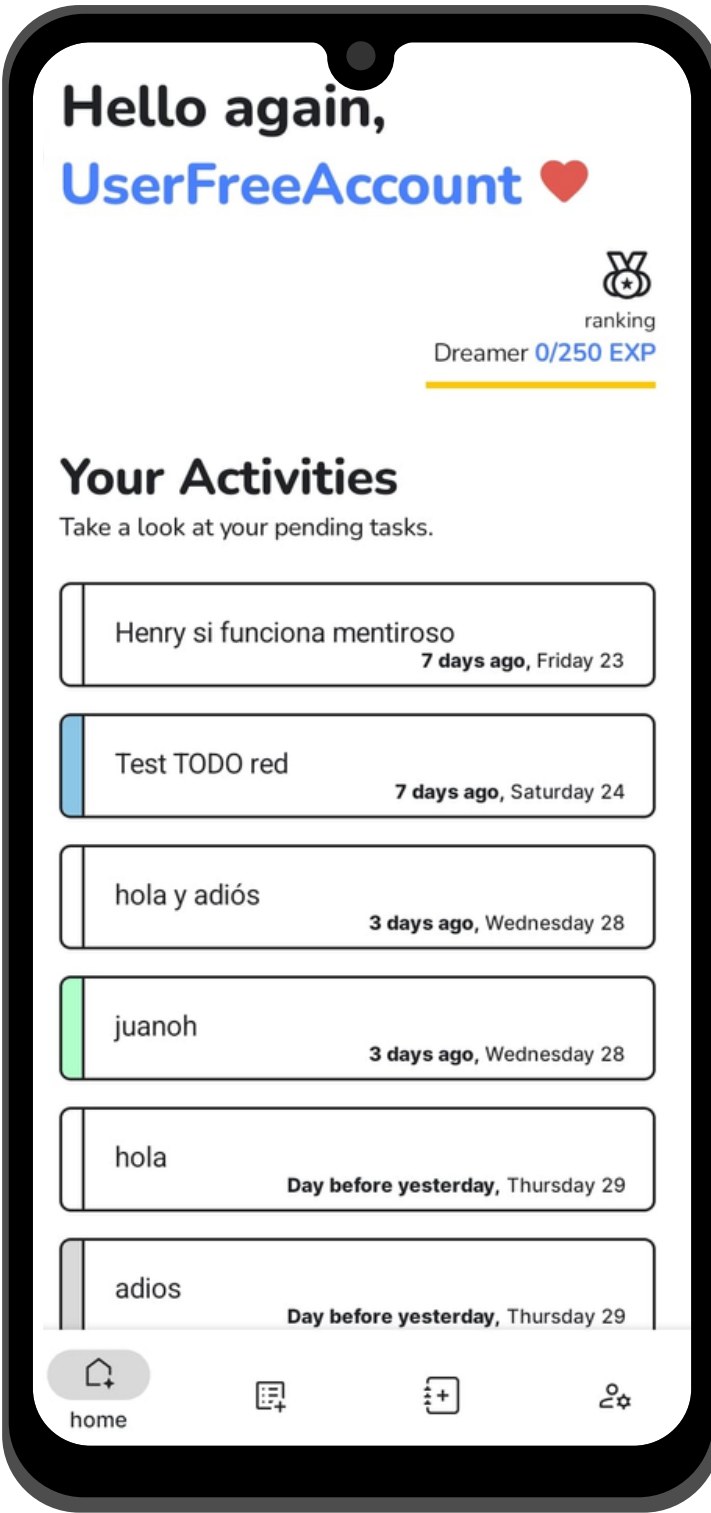

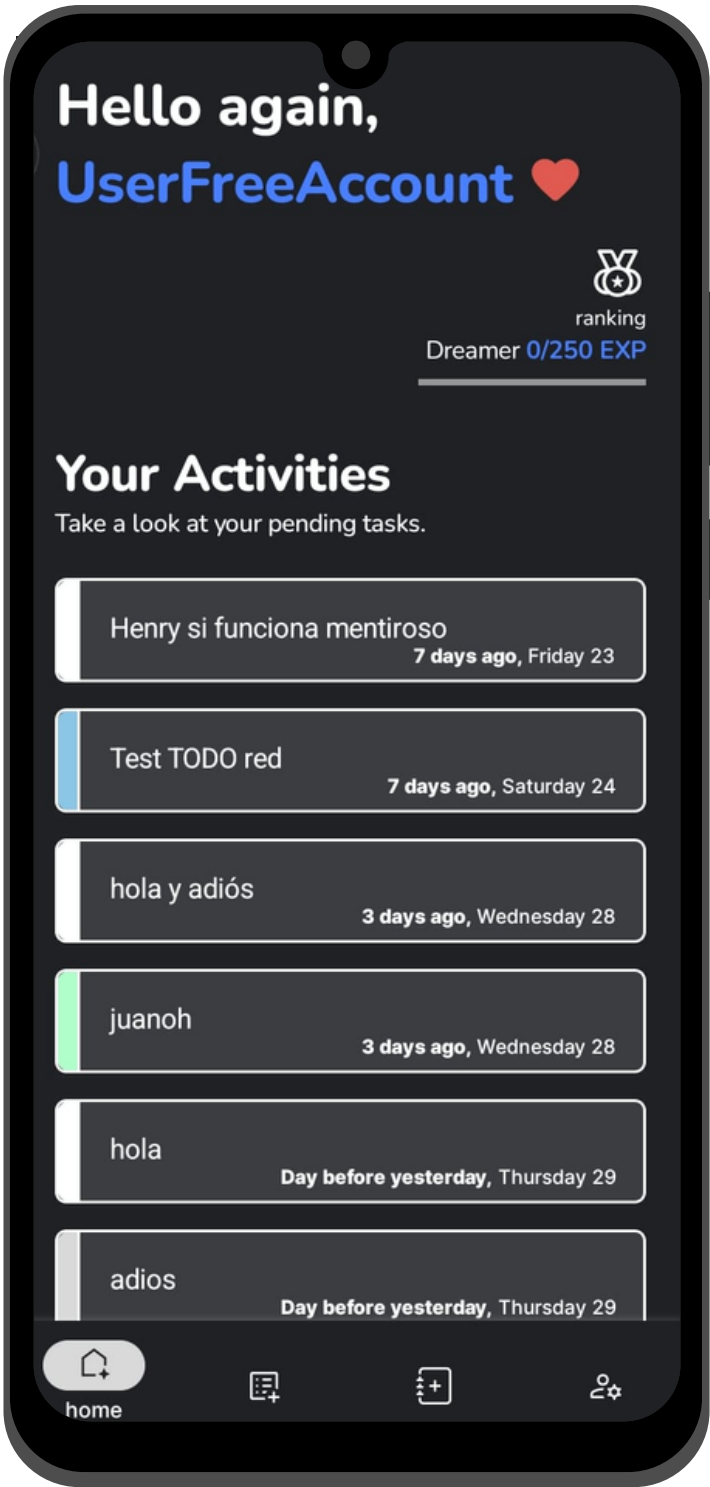

THEMES

BLACK MODE

The purpose of black mode is to provide a visually comfortable and energy-saving experience, particularly in low-light or nighttime environments.

WHITE MODE

Is a display option that features a predominantly bright or white background with dark-colored text and user interface elements. In white mode, the user interface elements are typically displayed in darker colors to ensure readability and contrast against the light background.

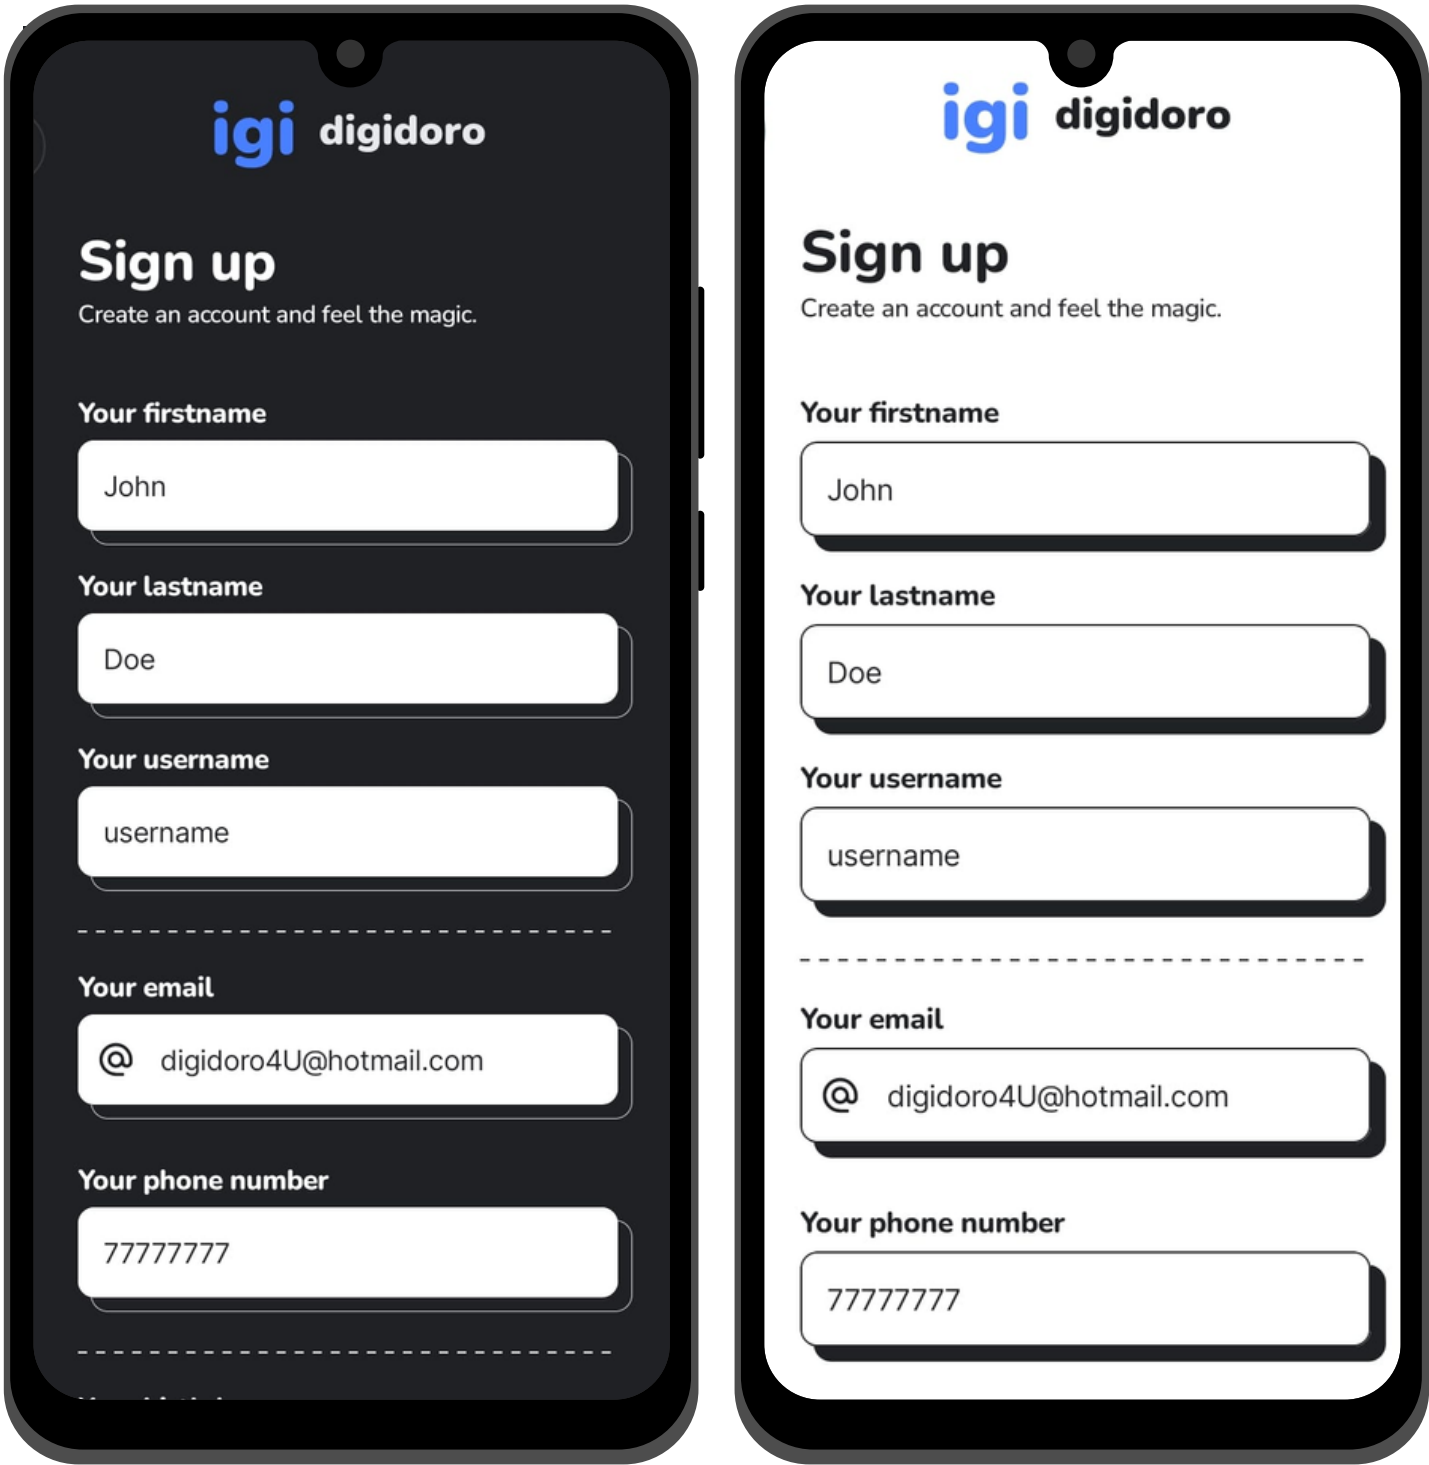

SIGN UP

Screen or view within the application or platform that allows new users to sign up to create an account.

It is an interface designed to collect necessary information from users and allow them to establish login credentials.

The sign up screen is crucial in enabling new users to join an app or platform by giving them a clear and easy-to-use interface to enter the required information and set up a personalized account.

LOGIN

Process by which the user enters their credentials, in this case, username and password, to access their personalized account within the application.

Login to our mobile application is used to authenticate and verify the identity of the user before allowing them to access the personalized functions and features of the application. Once the user provides the correct credentials, the app validates the information and grants them access to their account.

The image displays two mobile application screens side-by-side, illustrating the login process for the 'igi digidoro' app. Both screens feature the app's logo at the top and a 'Log in' title with the subtitle 'Sign in to continue'.

Left Screen (Dark Theme):

- Your username:** A text input field containing '@ digidoro4U@hotmail.com'.
- Your password:** A text input field containing 'e.g: *****' with an eye icon for toggling visibility.
- forgot your password?:** A link located below the password field.
- Log in:** A prominent button at the bottom.
- register:** A link located below the 'Log in' button.

Right Screen (Light Theme):

- Your username:** A text input field containing '@ digidoro4U@hotmail.com'.
- Your password:** A text input field containing 'e.g: *****' with an eye icon for toggling visibility.
- forgot your password?:** A link located below the password field.
- Log in:** A prominent button at the bottom.
- register:** A link located below the 'Log in' button.

ACCOUNT RECOVERY

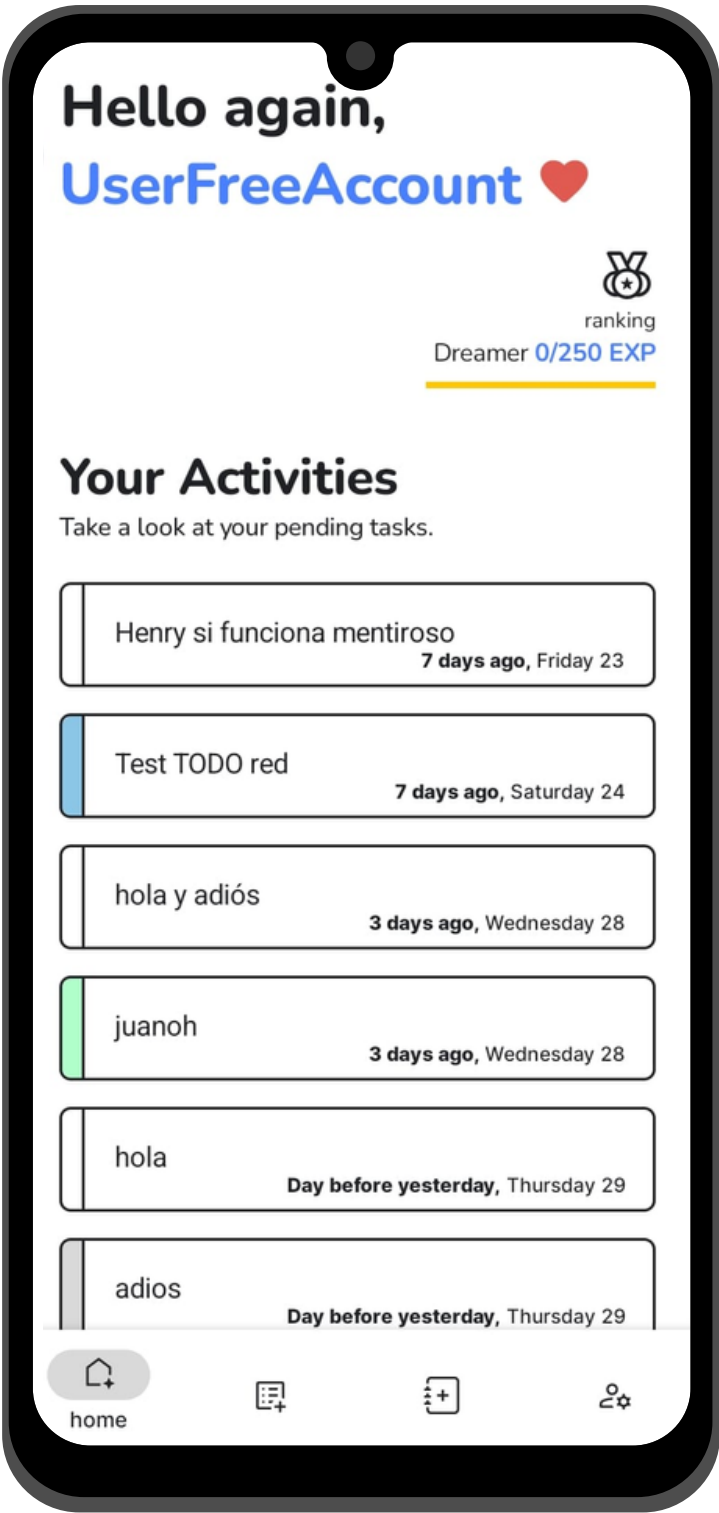

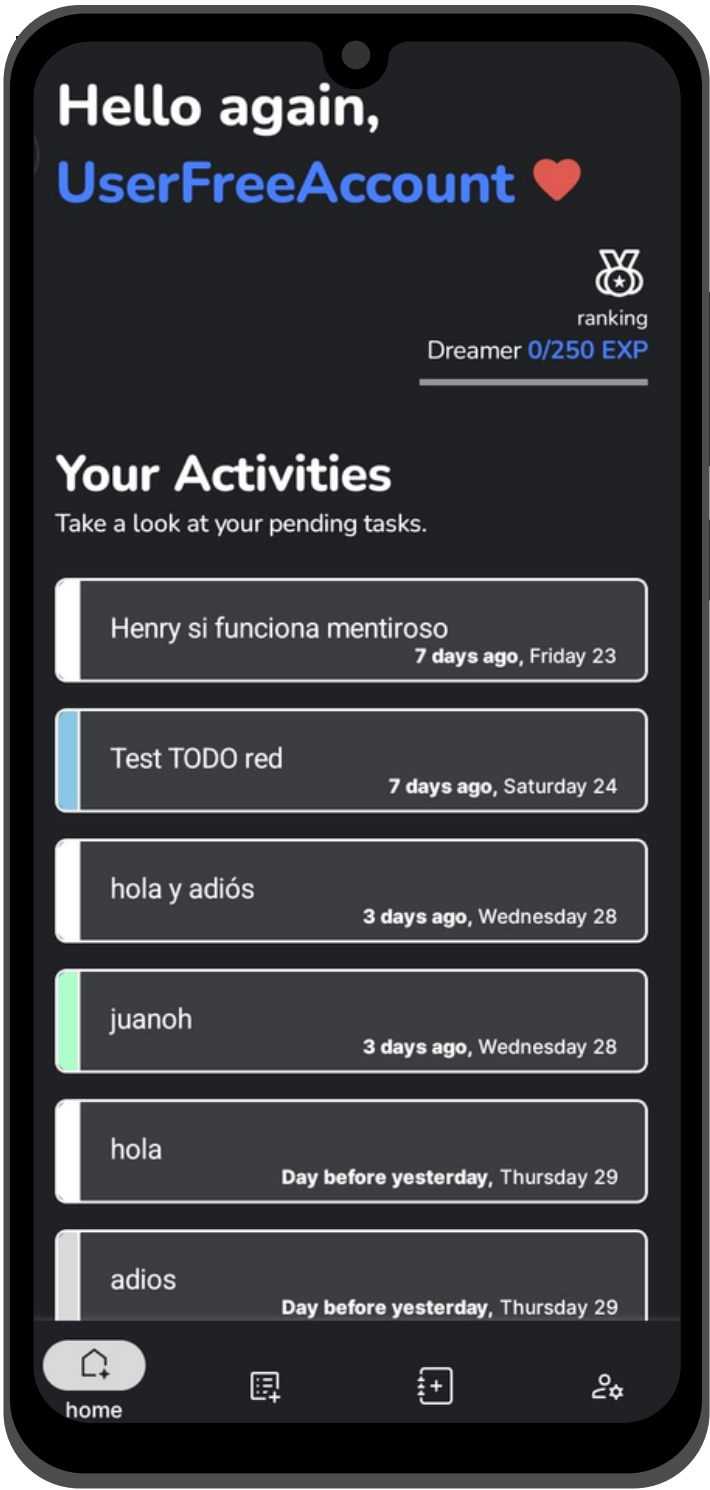

Screen or view within the application that allows users to regain access to their account in the event that they have forgotten their login credentials or have lost access for some other reason.

The account recovery screen is essential to provide a solution to users who have lost access to their account and allows them to restore their access safely and reliably.

HOME

The home screen or initial interface of the app that a user is directed to after logging in or opening the app. It is the starting point from which users can access different functions, features and sections of our application.

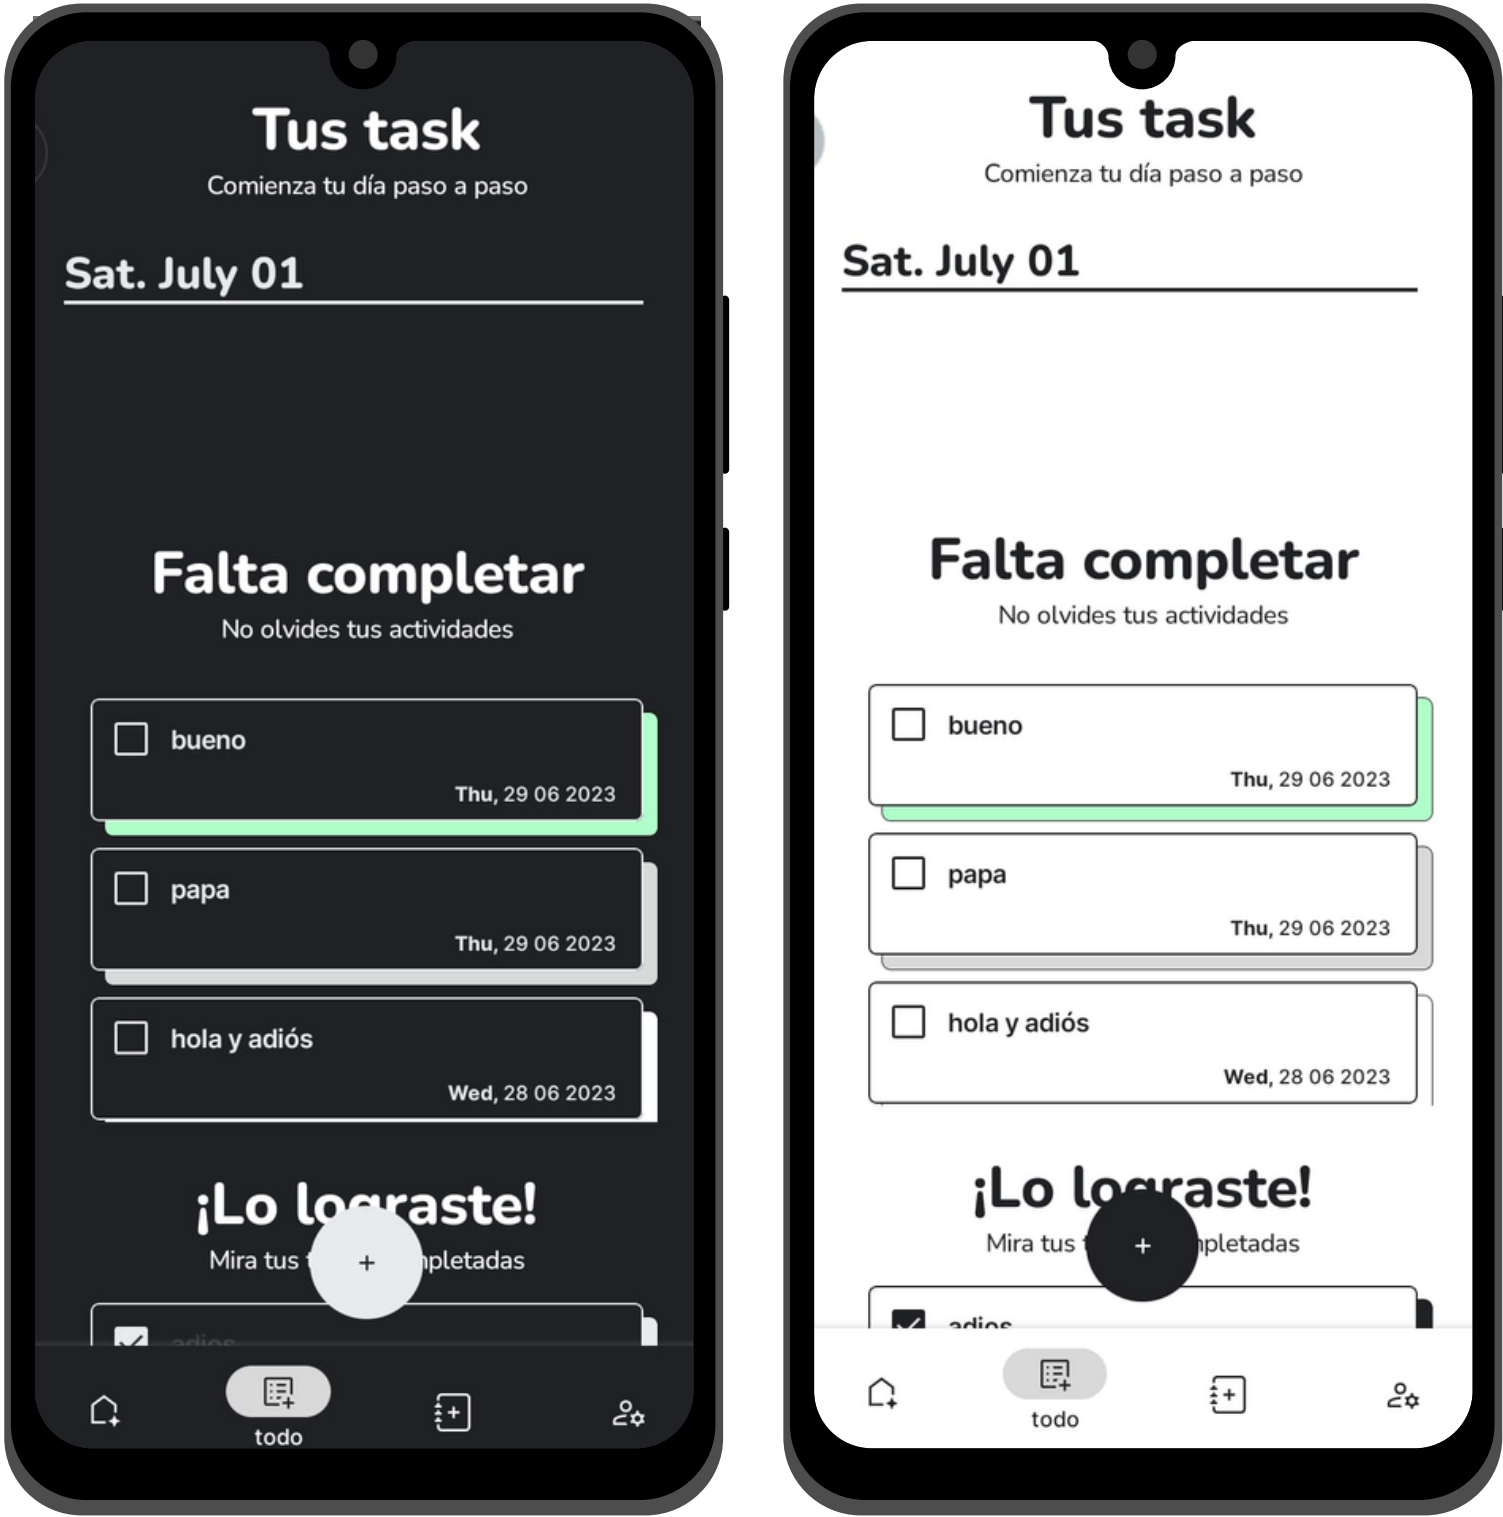

TASK

A screen or view within the application that displays a list of tasks or activities that need to be completed or done.

It is an interface designed to help users organize and keep track of their pending tasks.

On the task screen, each task is represented by a list item, which can include information such as the task title, description, priority, and completion status.

NOTES

Screen or view within the application that shows a list of notes or digital notes.

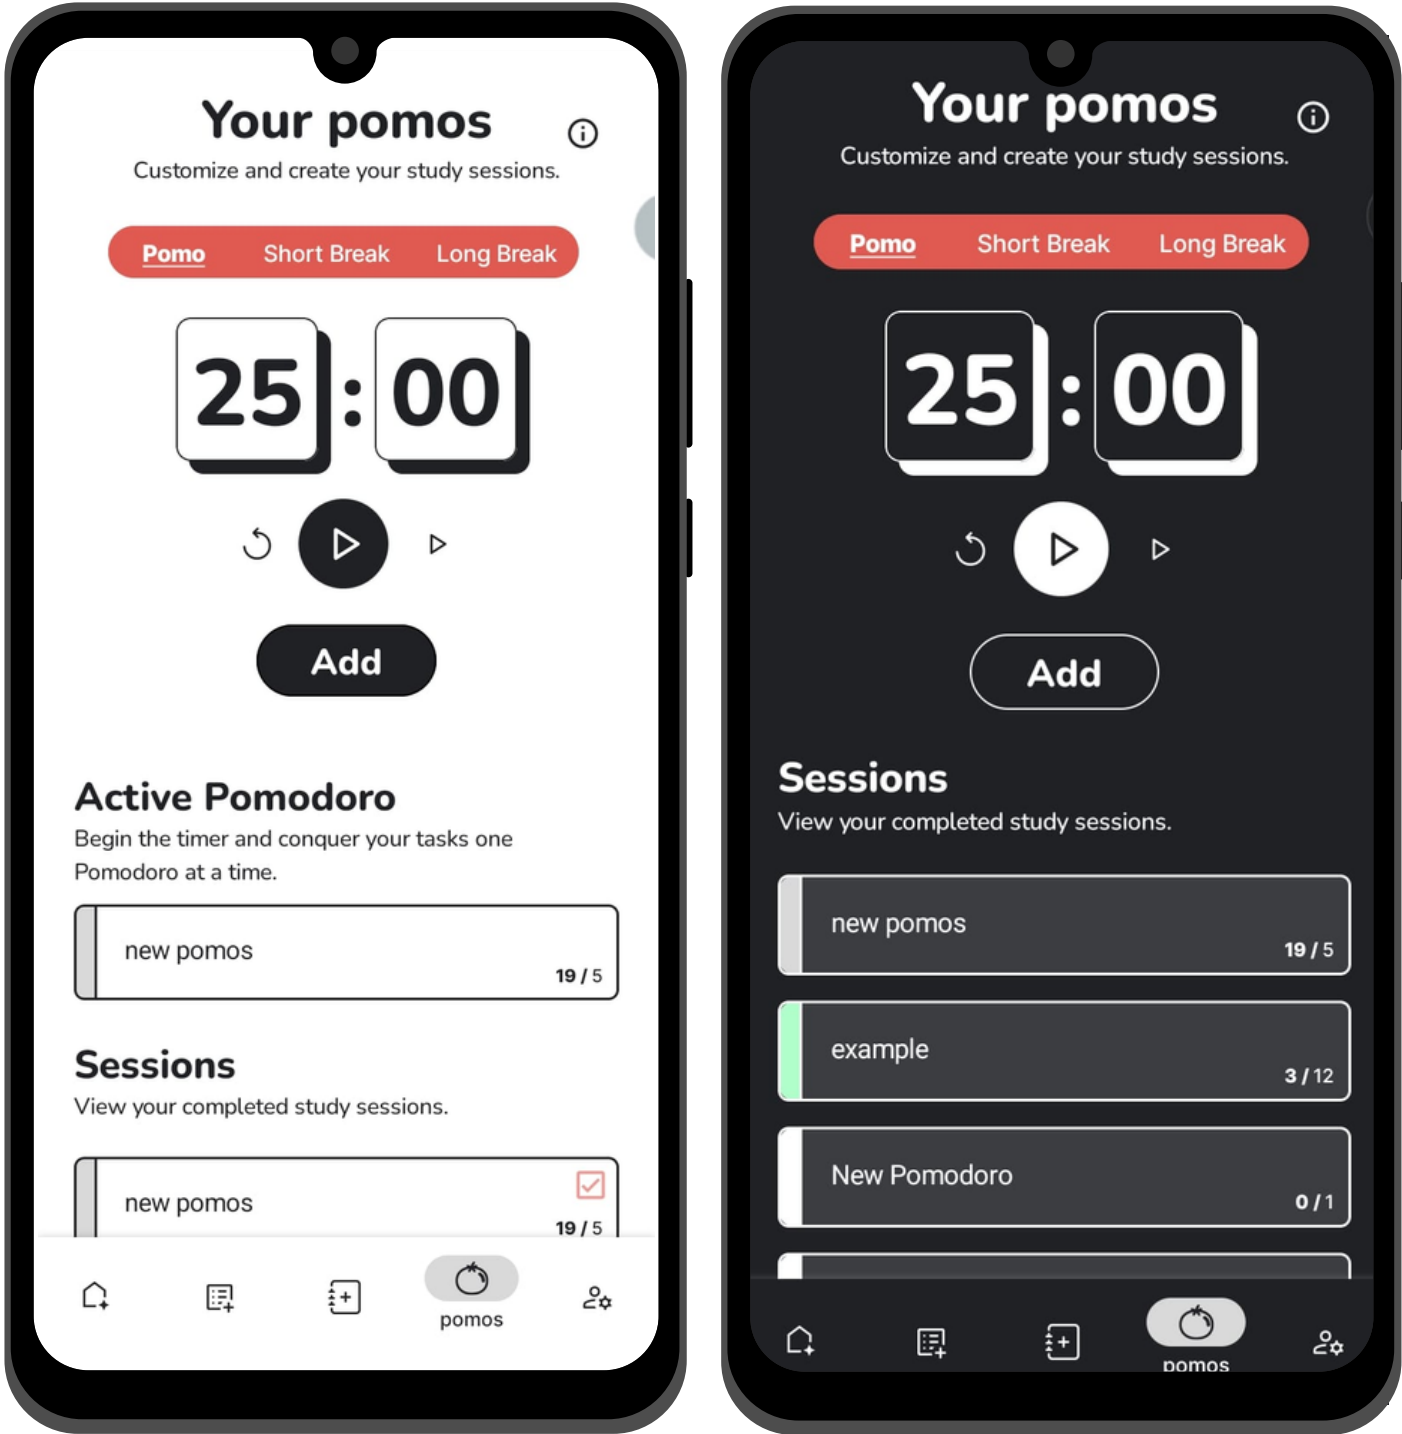

It is an interface designed so that users can efficiently take, organize and access their notes.

On the notes screen, each task is represented by a list item, which can include information such as the task title, description and priority.

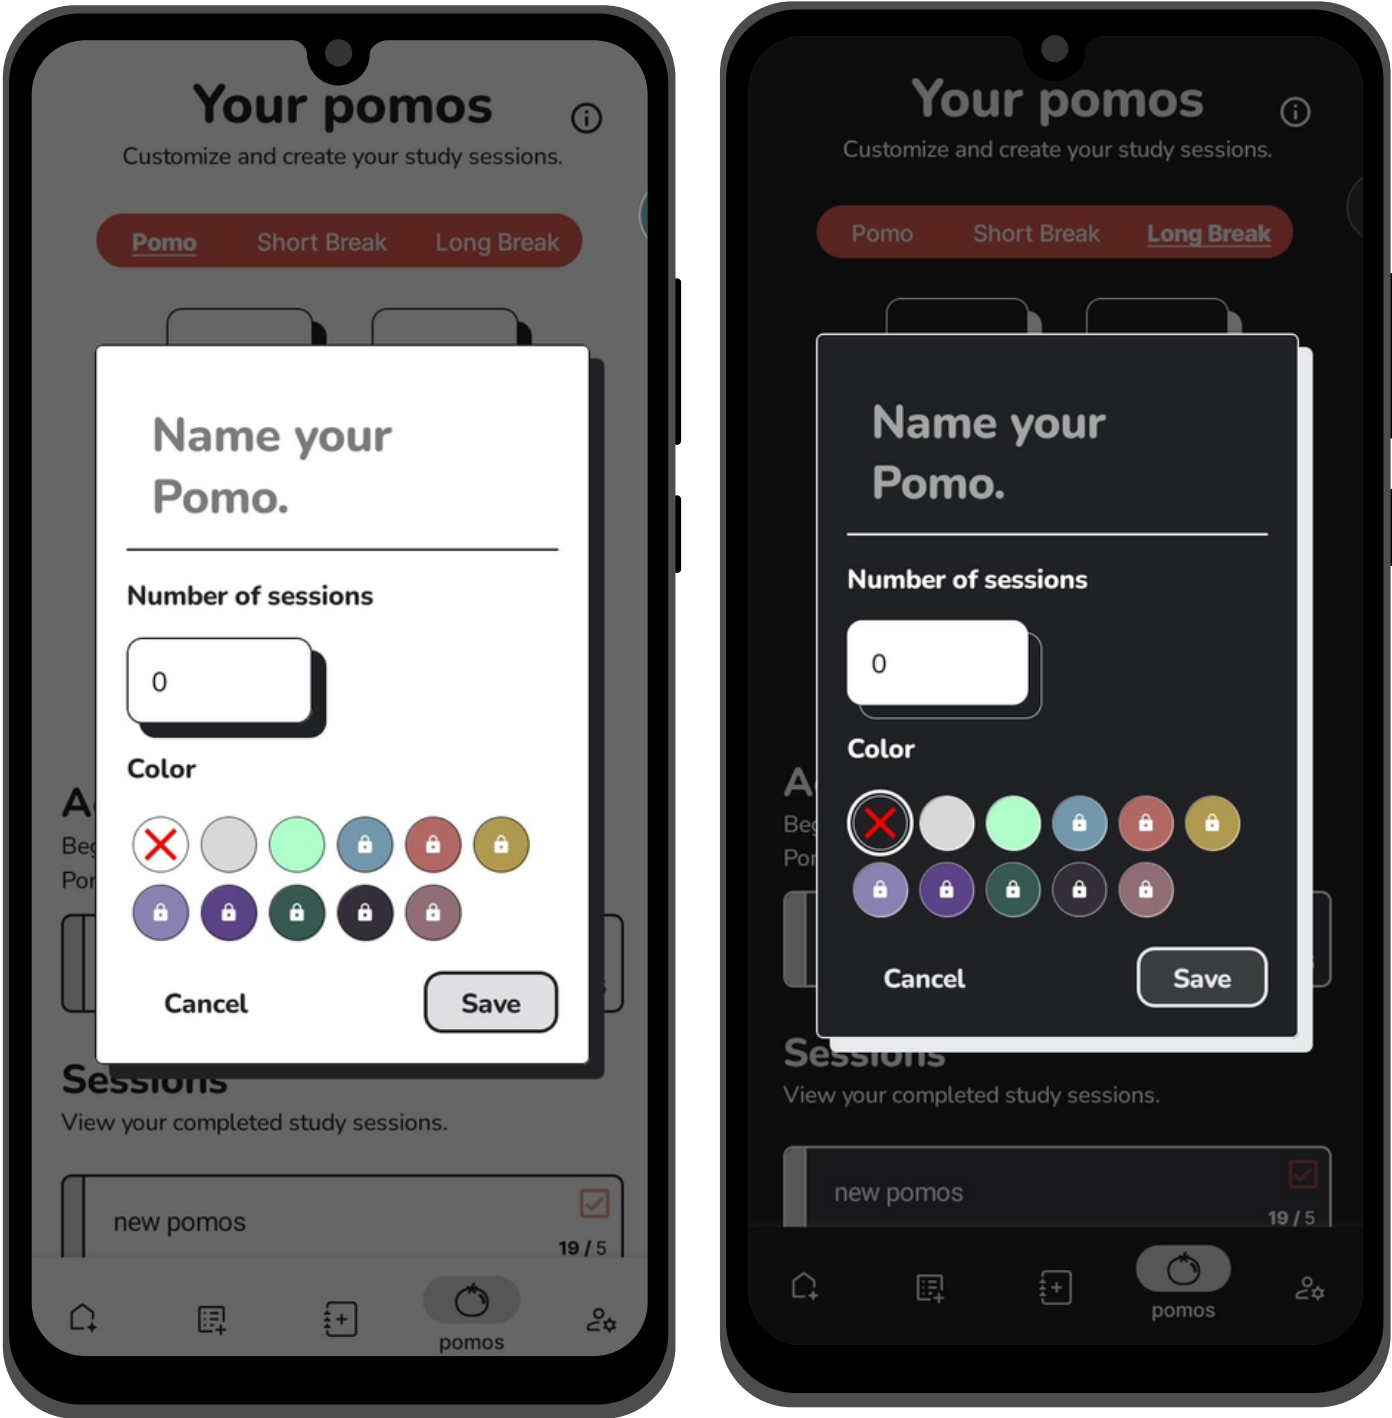

POMO

Using a Pomodoro screen provides a dedicated visual representation of time slots, this helps users focus on their tasks and keep up with the Pomodoro Technique. It can be particularly useful for those who prefer a dedicated, tangible tool to manage their time effectively.

POMO

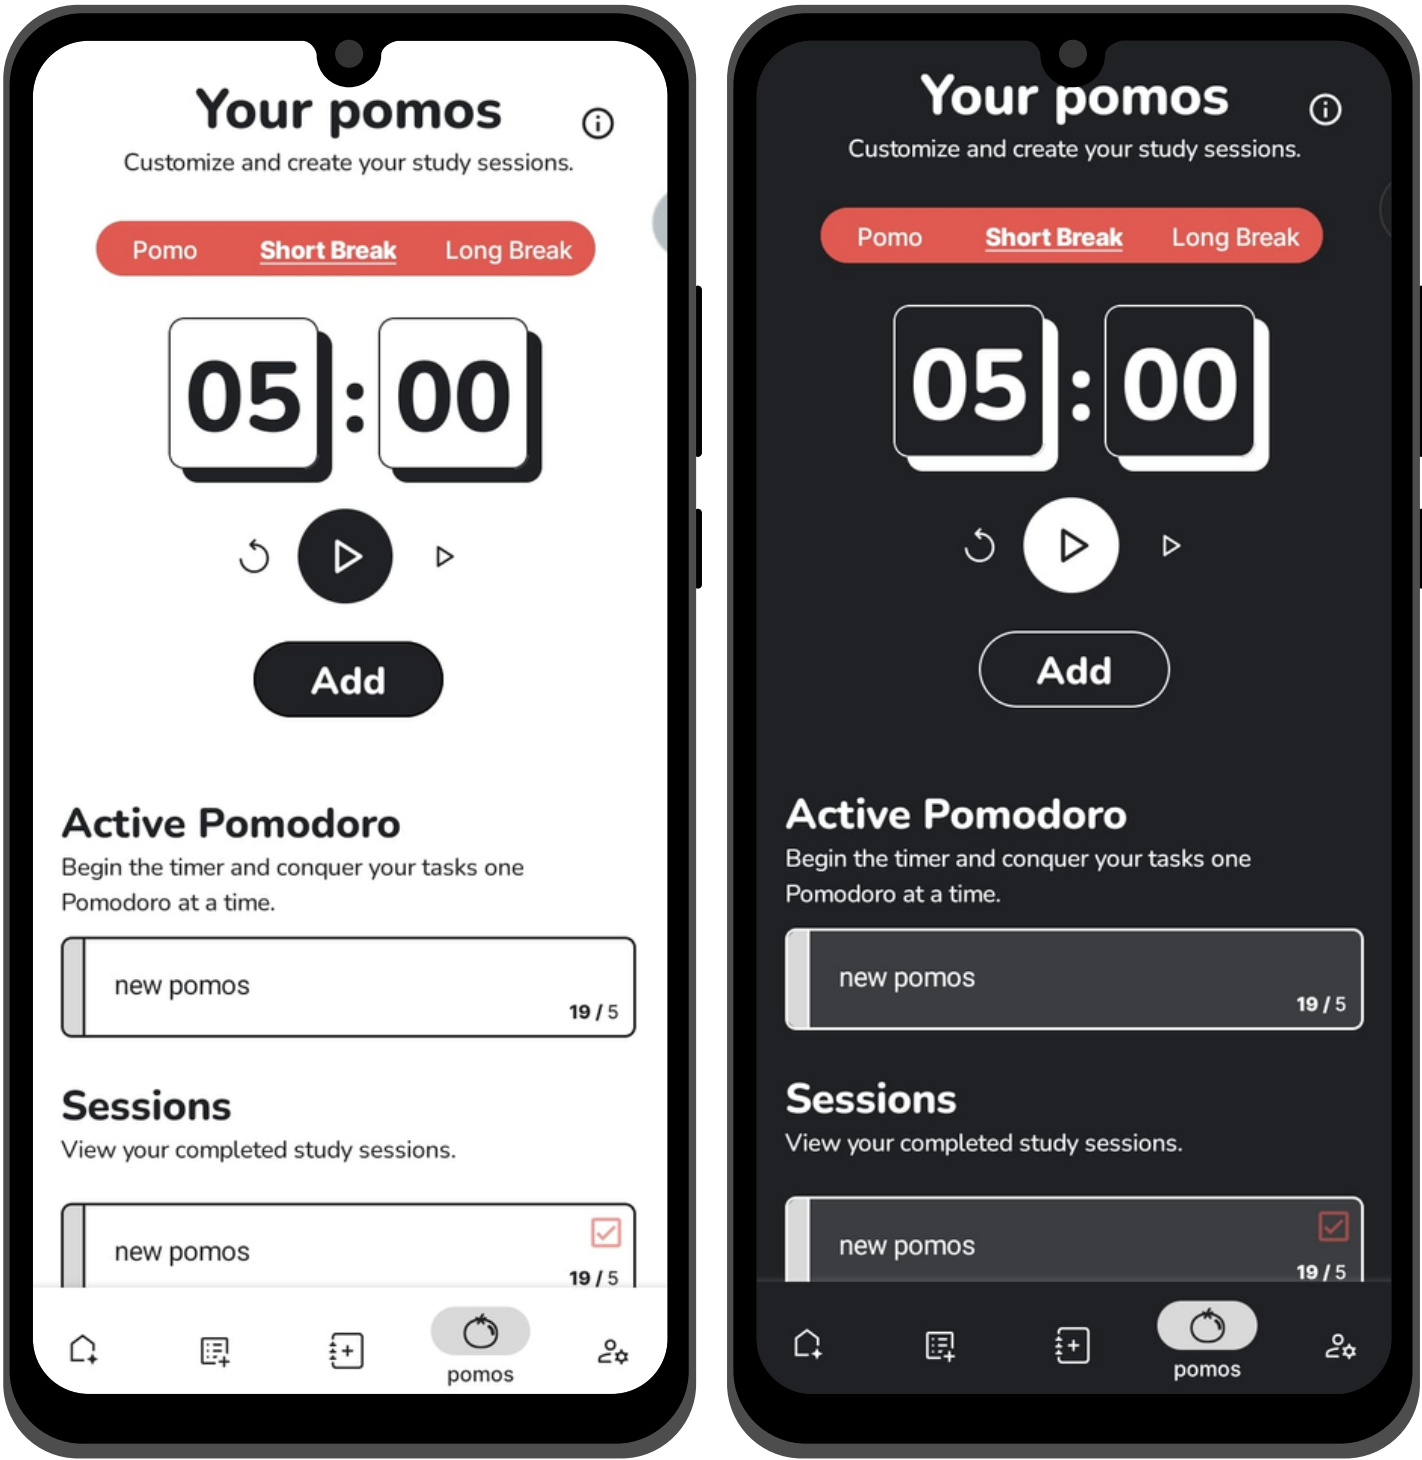

In order to add a Pomodoro session you must enter the name of the session, the number of repetitions you want to perform and the color with which you want your session to appear.

SHORT BREAK

Screen designed to help manage short breaks in the Pomodoro Technique. While the term itself isn't used much, it implies a screen or tool dedicated to helping people make the most of their short breaks during Pomodoro sessions.

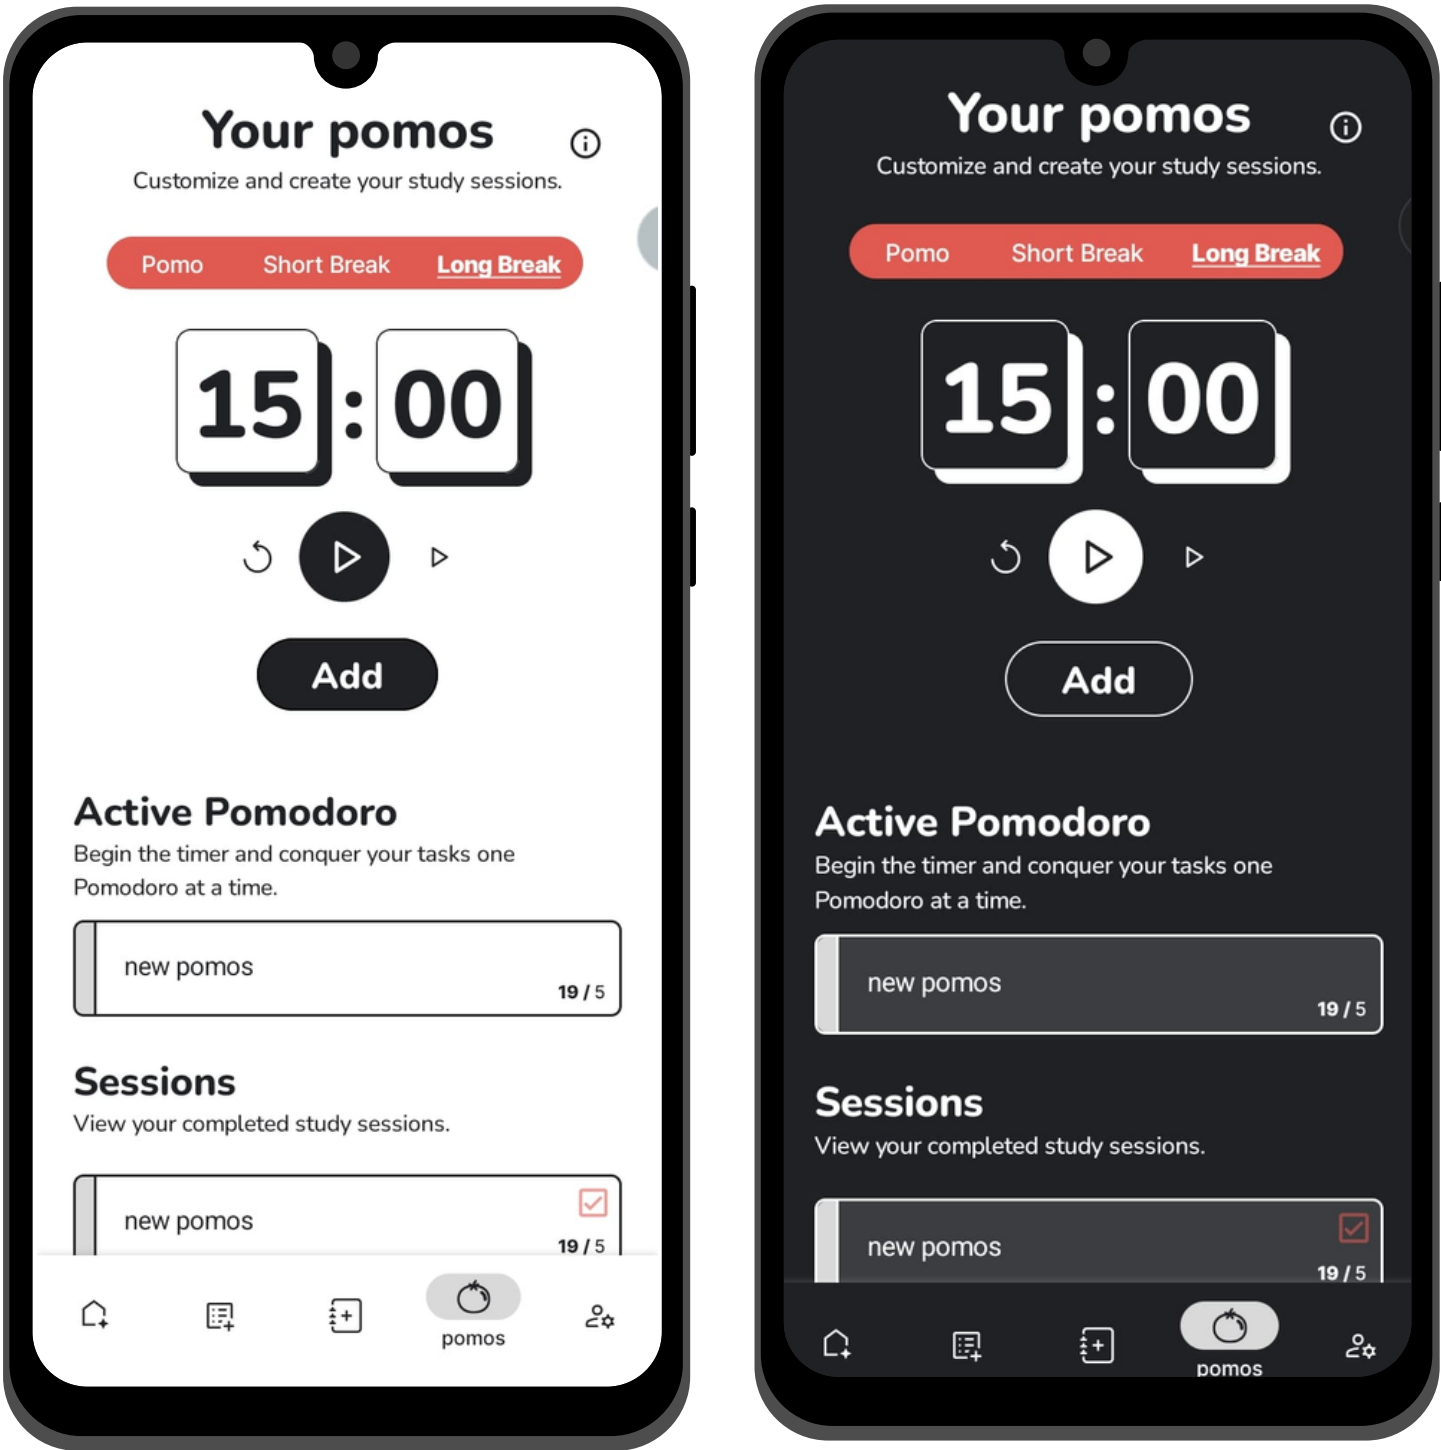

During the Pomodoro Technique, after completing a 25-minute work session (a Pomodoro), you typically take a short break of about 5 minutes before starting the next Pomodoro. The purpose of the short break is to provide a short rest period to relax and recharge before refocusing on work.

LONG BREAK

Screen to help manage longer breaks in the Pomodoro Technique.

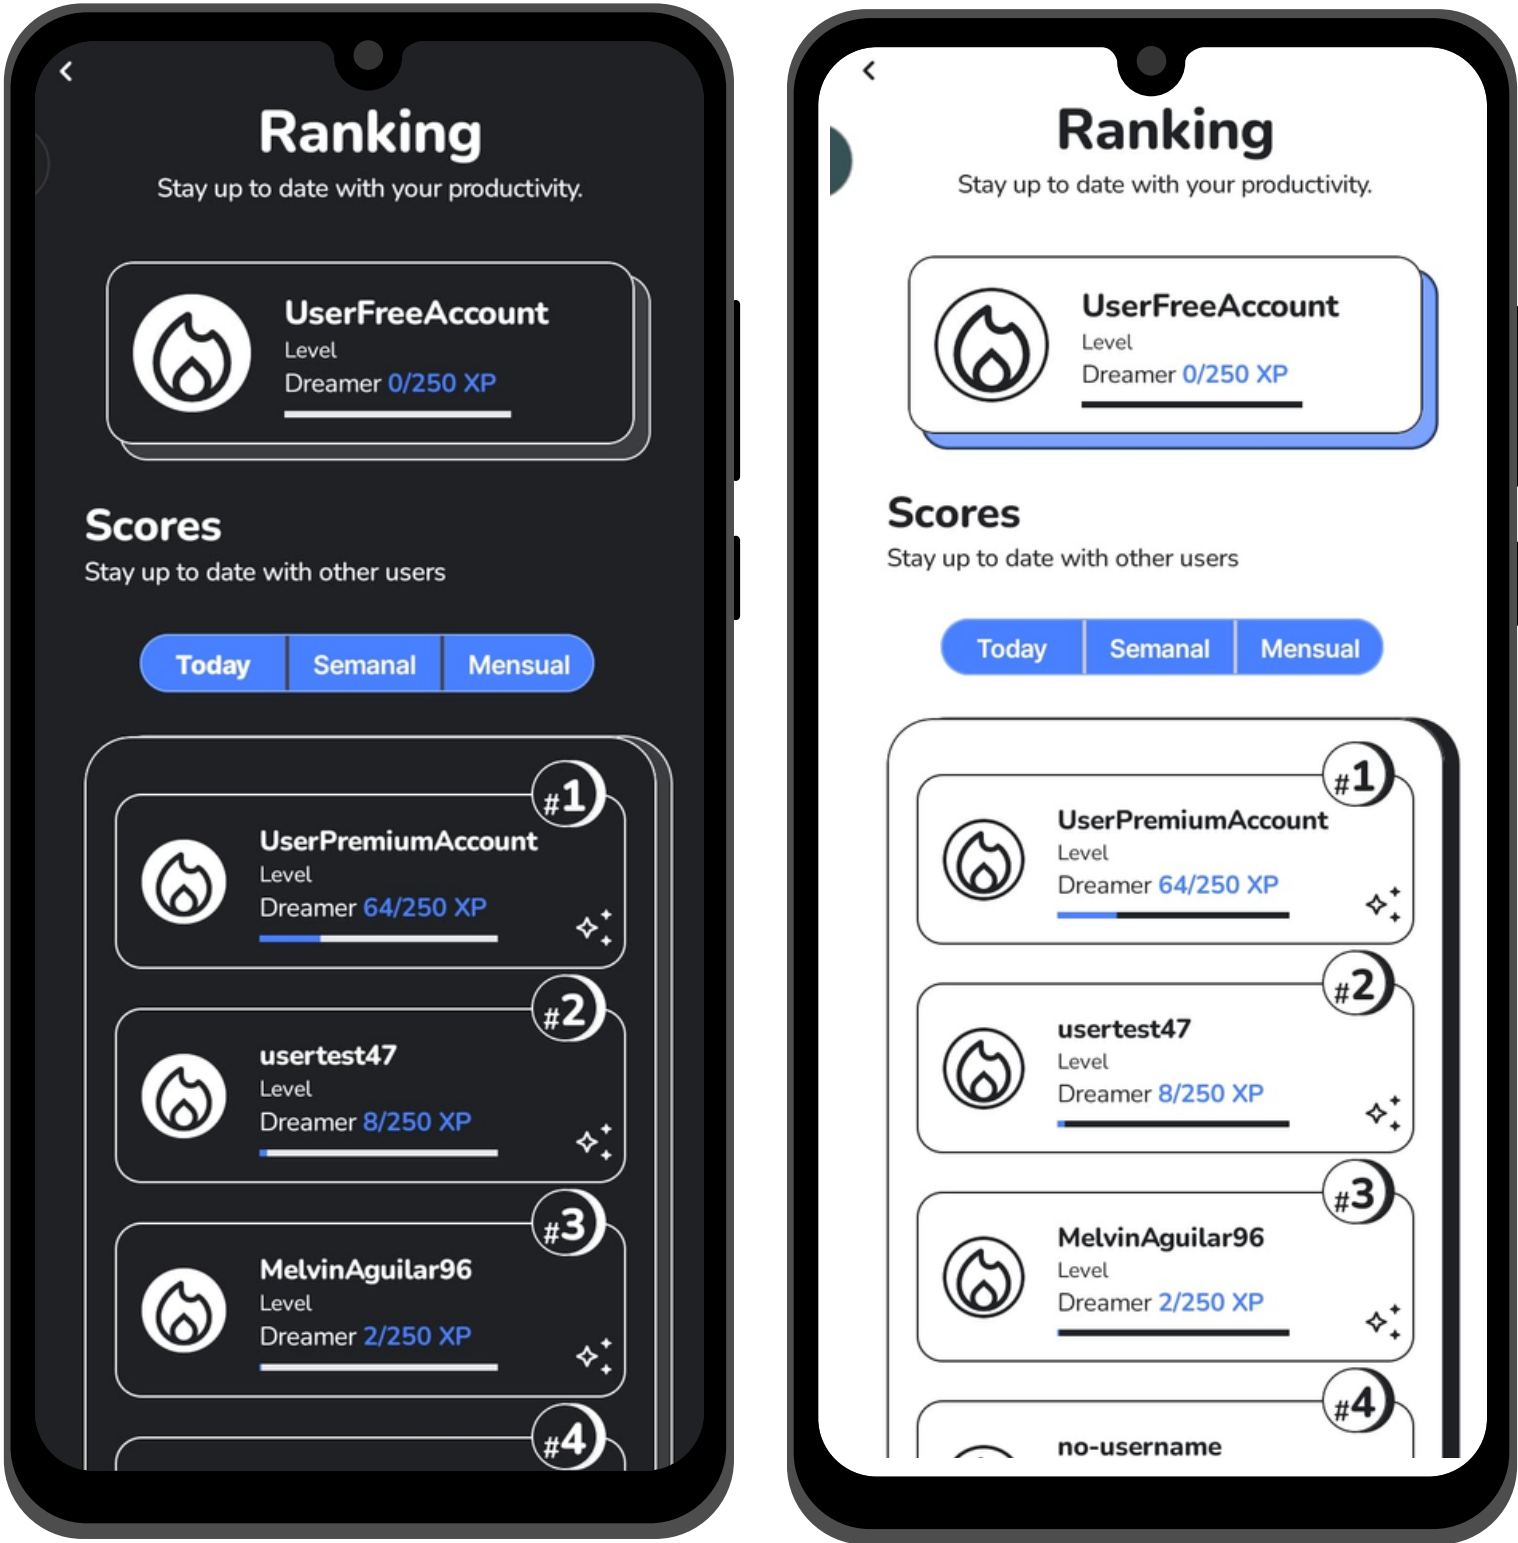

In the Pomodoro Technique, after completing a set number of work sessions, usually four Pomodoros, a longer break of around 15 minutes is taken before resuming work. The purpose of extended rest is to provide a more substantial period of rest and relaxation to prevent fatigue and maintain productivity.

RANKING

A screen or view within an application or platform that displays a ranking or list of items ordered by certain criteria or metrics.

On the ranking screen, items are presented in a specific order based on their performance and score.

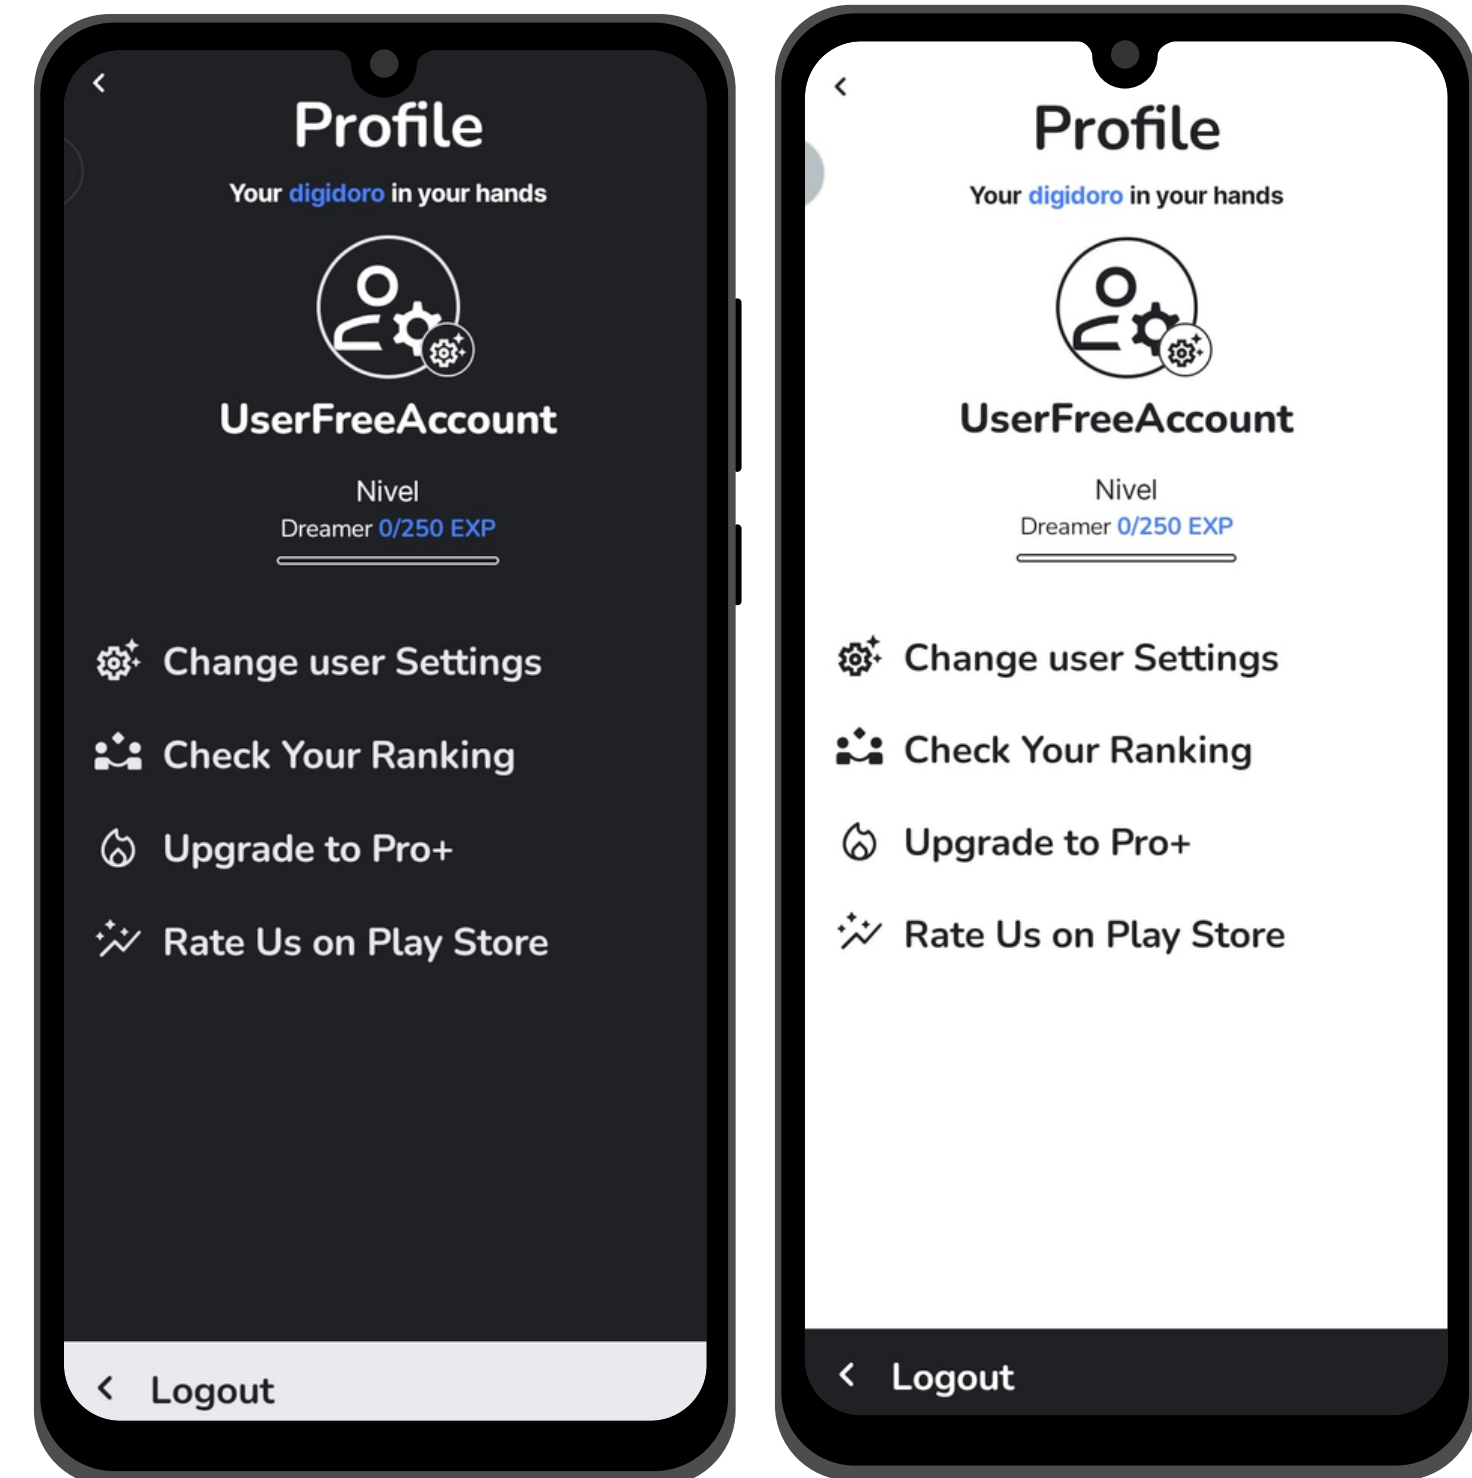

PROFILE

A screen or view within the application or platform that displays information and details specific to a registered user.

It is an interface designed to display and allow editing of personal information and settings associated with a user profile.

On the profile screen, users can find and manage data.

The profile screen is central to the app, providing users with a centralized space to access and manage their personal information and settings. This allows for a personalized experience and the ability to keep user information in the system up to date.

UPDATE USER

Action of modifying or changing the information associated with a specific user in a system or application. It typically involves making changes to the user's profile, account settings, or other relevant data.

In Digidoro you can update your name, your username, your phone number and your birthday
